

TESTIMONIAL CERTIFICATE

Issued by: AMER SIL KETEX Pvt. Ltd.

This certificate is presented to **EVAPOLER Eco Cooling Solutions** in recognition of their effective cooling and fume-extraction solutions installed at our core production facility.

How We Found EVAPOLER & Why We Chose Them

Our engineering team identified EVAPOLER while evaluating industrial cooling and ventilation technologies used in demanding manufacturing environments.

Their expertise in custom-engineered cooling & exhaust solutions made them the preferred choice.

Our only initial apprehension was whether such a large-scale integrated system—cooling plus long-duct fume extraction—could be executed without disrupting ongoing production.

Solution Opted & How It Worked

We opted for a combined cooling and ventilation solution comprising:

- **2 units of 50,000 CFM High Static Cooling Units**
- **Multiple cabinet exhaust systems with hoods and long-running ducts**

The high-static cooling units delivered powerful, uniform airflow across the production zone, while the exhaust system efficiently captured and expelled fumes at the source.

Together, the system created a balanced environment with fresh, cool air and effective fume extraction.

Recommendation

We strongly recommend EVAPOLER's industrial cooling and ventilation solutions to any manufacturing facility facing heat and fume challenges.
